Business & Team Breakfast Standard

Version 1.0 | FINAL / LOCKED | September 2026

Morning Box - Your Personal Breakfast Assistant

Purpose

This standard defines the MVP architecture for Morning Box business and group breakfast ordering, including selection, group dietary and allergy handling, sizing, scheduling, pricing, payment, bakery allocation and post-order management.

Business Experience Principle

Business Breakfast is designed for speed, scale and simplicity. It offers controlled choice from the standardized Morning Box breakfast range without exposing the partner bakery's full menu or requiring individual personalization.

1. Business Breakfast Architecture

The Morning Box homepage includes a distinct Business Breakfast entry point for team, meeting and company breakfast needs. Team, Meeting and Company are use cases, not separate products and do not create an extra ordering question unless they later change the experience.

All Business Breakfasts are individual breakfast boxes rather than shared platters. Headcount does not define the use case; for example, a 20-person meeting remains a meeting.

> **Number of People → Breakfast Selection → Day → Delivery → Confirm**
>
> **Don't ask a question unless the answer changes the experience.**

2. Business Breakfast Selection

After entering the total number of people, the Business User has two simple selection paths:

Morning Box Mix: Morning Box distributes the order as evenly as practical across the available standardized breakfast models. For example, 20 people across four models becomes 5 + 5 + 5 + 5; 10 people may become 3 + 3 + 2 + 2.

Choose Your Boxes: The user can view Morning Box's standardized breakfast models with composition, size, price and dietary information, then select any required quantity of each model.

> **Business Breakfast offers controlled choice from the Morning Box menu — never the partner bakery's full menu.**

3. Group Dietary Requirements & Allergies

The Business User is responsible for collecting relevant dietary and allergy information from the group before ordering. Morning Box asks one simple question: Does anyone have dietary requirements or allergies?

If No, the order continues. If Yes, the user defines one or more Special Breakfast groups rather than entering potentially ambiguous separate counts.

Example: Special Breakfast 1 — Vegan + Nut Allergy — Quantity 2. Special Breakfast 2 — Dairy-Free — Quantity 1.

Special Breakfast quantities are separated from the general group quantity. Product and bakery eligibility remain subject to the locked safety rules in MB-BOX-001.

4. Business Breakfast Size

Business Breakfast uses the same three standardized sizes: Light / Regular / Large. Regular is the default. Size is applied to a Breakfast Model × Quantity group rather than forcing one size across the entire order or requiring person-by-person sizing.

Morning Box Mix defaults all breakfast models to Regular; the user may edit the size of a selected model group.

> **Size changes quantity, not composition.**

5. Business Customization

Business Breakfast intentionally removes component-level customization to keep group ordering fast and operationally reliable.

> **No Swap / No Add Something Extra / No component-level customization.**

The user controls only Breakfast Model, Size and Quantity. Special Breakfast is reserved for dietary requirements and allergies, not personal taste customization.

6. Business Scheduling & Delivery

Business Breakfast is a pre-order service, not an on-demand service. The ordering sequence includes:

Day → Delivery Window → Location → Contact Person

Multi-Day Business Orders are supported. A company may arrange different breakfast quantities and selections for multiple future days in one planning process. Each day remains operationally independent and may be edited or cancelled subject to its own cutoff.

Multi-Day ordering is not a subscription or automatic recurring order. Exact cutoff times and delivery windows are deferred to MB-DLV-001.

7. Business Pricing & Volume Discount

Larger daily Business Breakfast orders may receive an automatic volume discount. No promo code or manual discount request is required.

Breakfast Price × Quantity → Volume Discount → Final Order Price

For Multi-Day Orders, discount eligibility is calculated using the quantity for each individual day rather than aggregating quantities across multiple days. Final price and discount are displayed clearly before payment.

Exact discount tiers and percentages remain TBD pending product costing, bakery margin, delivery economics and Morning Box margin analysis.

8. Business Payment & Invoice

MVP Business Breakfast orders are prepaid. The customer pays Morning Box directly; bakery and logistics settlement is handled in the backend.

Business Users may receive a Company / Tax Invoice using the applicable billing information, including company name, billing details, TRN when applicable and email.

Order → Final Price → Pay Online → Confirmation + Invoice

Credit Accounts, Pay Later and 30-Day Payment Terms are outside the MVP and may be considered later for approved corporate clients.

9. Bakery Allocation & Large-Order Fulfilment

Morning Box should fulfil a Business Order through one eligible Partner Bakery whenever possible.

Single Bakery First → Nearest Eligible Bakery Expansion when required

If the nearest eligible bakery cannot fulfil the complete order because of capacity, Morning Box may allocate the remaining quantity to the next nearest eligible partner bakery. The customer still experiences one Morning Box order and one payment; multi-bakery coordination is handled in the backend.

Bakery eligibility considers Product Availability, Dietary/Allergy Capability, Capacity and Delivery Window.

10. Business Order Management

After confirmation, the Business User can manage the order until the applicable operational cutoff. Supported actions are: View Order / Edit Order / Change Quantity / Update Special Breakfast / Cancel Order / Download Invoice.

For Multi-Day Orders, each day is independently manageable. Editing one day does not alter other scheduled days.

The system must continuously validate that the allocated breakfast quantity matches the intended headcount:

Total Boxes = Total Number of People

If headcount changes, the user is shown any unallocated or excess breakfast quantity before reconfirming. Price and volume discount are recalculated where applicable.

Edit what you need, without rebuilding the order.

Deferred Detailed Specifications

The following remain intentionally deferred to later standards: exact Business Breakfast menu models, exact volume-discount tiers and percentages, exact cutoff times, exact delivery windows, detailed fulfilment routing logic and any future corporate credit terms.
