Product & Menu Standard

Version 1.0 | FINAL / LOCKED | September 2026

Morning Box - Your Personal Breakfast Assistant

Purpose

This standard defines the product architecture, breakfast context framework, core item library, swap and add-on logic, size and portion model, pricing architecture, dietary and allergy rules, and partner bakery consistency requirements for the Morning Box MVP.

Core Product Principle

Morning Box recommends a complete breakfast first, then allows controlled personalization without turning the experience into a build-your-own menu or bakery marketplace.

Recommend → Swap within Category → Add Something Extra → Confirm

1. Product Architecture

Morning Box generates a complete breakfast recommendation using the user's Base Morning Profile, Daily Context, dietary requirements and allergy restrictions. The recommendation is the starting point; the user does not build a breakfast from an empty screen.

Swap: Every recommended component may be swapped for one eligible alternative within its approved internal Swap Group. Only one item replaces the original component.

Add: Add-ons are presented separately after the recommended breakfast. They are standalone Morning Box-approved bakery products and may be ordered in multiple quantities.

No Remove: There is no independent Remove action. Safety and dietary exclusions are handled before recommendation generation.

> **Recommend first. Customize second.**

2. Breakfast Context Framework

> **Daily Context defines the need. Eating Style defines how that need is fulfilled.**

Context	Product intent
Active Morning	A more substantial breakfast suitable for a more active morning. Health-Conscious and Flexible versions may differ in composition; no medical or performance claims are implied.
Regular Workday	A balanced and practical breakfast for a typical working morning. Regular describes context, not portion size.
Busy & On the Go	A practical breakfast prioritizing convenience and ease of eating. The format may change, but the breakfast is not automatically smaller.
Relaxed Morning	A more leisurely breakfast with greater flexibility and variety. Relaxed does not automatically mean a larger portion.

Breakfast Preferences further influence the recommendation, while dietary and allergy rules define eligibility.

3. Internal Swap Categories

Swap Categories are an internal product-system structure. Users do not need to see category names. Items belong to the same Swap Group only when they can reasonably replace one another in a Morning Box. Exact item-to-item Swap Mapping is deferred to the Detailed Product Specification.

4. Core Item Library

4.1 Egg & Hot Savory

Core: Scrambled Eggs / Omelette / Boiled Eggs / Beans.
Flexible-only: Sausage / Beef Bacon / Turkey Bacon.
Outside Core MVP: Fried Eggs / Halloumi.

4.2 Bread

White Sourdough / Whole Wheat Sourdough / Multigrain Bread / Ciabatta / Focaccia.
All core bread must be baked in-house by the partner bakery. Context and Eating Style may influence the default bread, but bread does not define the morning context by itself.

4.3 Pastry

Plain Croissant / Cheese Croissant / Pain au Chocolat / Fruit Danish.

4.4 Fresh Savory

Avocado / Tomato / Cucumber / Mixed Greens / Olives.

4.5 Fruit

Fresh Seasonal Fruit Mix / Berries / Banana. Seasonal Fruit Mix may vary within an approved fruit list while maintaining portion and freshness standards.

4.6 Dairy & Cheese

Greek Yogurt / Labneh / Feta Cheese.

4.7 Grains & Bowls

Overnight Oats / Granola / Muesli.

4.8 Spreads & Accompaniments

Cream Cheese / Butter / Honey / Jam / Peanut Butter.

4.9 Sweet Breakfast Strategy

Sweet recommendations in the MVP are created from the existing library, such as pastry, fruit, yogurt, oats, berries and approved spreads. Pancakes, French Toast and Waffles are outside the Core MVP.

4.10 Beverages

Beverages are not sold, delivered or included in the Morning Box MVP. Coffee, tea, juice, water and smoothies are outside the Core Product Library. After order confirmation, Morning Box may offer a simple assistant-style reminder to prepare a preferred hot or fresh drink for the next morning. This reminder is not part of the order and adds no purchase step.

5. Swap & Add Architecture

Swap appears beside breakfast components and always stays within the relevant eligible Swap Group. Swap does not add another component and does not change the price.

Add Something Extra is a separate section after the breakfast. Users may choose approved standalone products and order multiple quantities. The full partner bakery menu is never displayed.

> **Only Morning Box-approved standardized extras are available.**

6. Add-on Library

Bread Add-ons: White Sourdough / Whole Wheat Sourdough / Multigrain Bread / Ciabatta / Focaccia → Half Loaf or Whole Loaf → Quantity. Exact standardized loaf weights are defined later in Production Specifications.

Pastry Add-ons: Plain Croissant / Cheese Croissant / Pain au Chocolat / Fruit Danish → Standard Unit → Quantity.

Fruit, eggs, yogurt, cheese, spreads and other breakfast components are not sold as independent MVP add-ons.

> **Add-ons are selected standalone bakery products, not an extension of the full breakfast component library.**

7. Size & Portion Logic

Light / Regular / Large. Regular is the default size. Size changes the quantity of existing components, not the composition of the breakfast. Large does not automatically add a new component and Light does not remove one. Exact gram and unit standards are deferred to Production Specifications.

> **Size changes quantity, not composition.**

8. Pricing Logic

The user sees one clear price for the recommended breakfast. Morning Box may use a limited number of internal price levels based on product composition and cost, but these levels are not shown as user-facing budget categories.

> **Breakfast Base Price + Size Adjustment + Add-ons = Final Price**

Light is priced below the Regular base price; Regular is the default base price; Large is priced above it. Swap within an approved Swap Group does not change price. Add-ons have independent prices multiplied by quantity. The total price updates immediately after any relevant change.

Actual AED prices remain TBD pending component costing, bakery economics, packaging, Morning Box margin and delivery economics.

9. Dietary & Allergy Product Rules

Allergy: Hard Safety Filter. An allergen-restricted item must not appear in Recommendation, Swap or Add-on choices.

Dietary Requirements: Vegetarian, Vegan, Dairy-Free and other requirements filter product eligibility before the recommendation is generated.

Special Handling: For sensitive requirements such as Gluten-Free and allergy-related preparation, a partner bakery must be specifically eligible for the required handling standard. Merely offering a product with a relevant label is not sufficient.

> **User Safety → Eligible Products → Eligible Bakery → Recommendation**

> **Safety restrictions always override preferences.**

10. Partner Bakery & Product Consistency

Morning Box uses a Controlled Standardization model. For each Core Item, Morning Box defines minimum requirements for ingredients, portion or weight, preparation, presentation, packaging and freshness.

Partner bakeries may preserve their craft and identity as long as the delivered product remains within the approved Morning Box standard. Morning Box standardizes the product experience, not the bakery's identity.

Every Morning Box partner bakery must bake its own bread in-house.

A bakery is eligible for an order only when it can produce the required product, meet the relevant dietary/allergy handling requirements, support the requested window/capacity, and comply with Morning Box product standards.

Deferred Detailed Specifications

The following are intentionally deferred to later execution standards: exact recipes, exact grams and portion units, loaf weights, final AED pricing, detailed ingredient specifications, and exact item-to-item Swap Group mapping. These are implementation details beneath this locked product architecture.
