MB-DSN-001

Morning Box Design & UI Standard

Version 1.0 | Approved visual direction | 14 September 2026

Purpose

This document defines the visual and interface direction that the India development/design team must follow for the Morning Box MVP demo. The approved logo and visual language are fixed. Marketing headlines, slogans and page copy shown in visual references are placeholders and may change; the design system, hierarchy and overall visual character should remain consistent unless a later standard explicitly revises them.

Status: APPROVED DESIGN STANDARD

1. Brand Direction

Morning Box should feel **premium, warm, fresh, calm, intelligent and effortless**. It must not resemble a mass-market food-delivery marketplace. The interface should reduce visual noise and decision fatigue, using generous whitespace, restrained accents, editorial typography and high-quality breakfast imagery.

Design keywords

Premium / Minimal / Warm / Fresh / Personal / Intelligent / Calm / Modern

Avoid

Bright multi-colour marketplace UI, crowded restaurant cards, excessive badges, discount-led visuals, cartoon styling, neon colours, heavy gradients, dense navigation, overuse of icons, or screens that feel like Deliveroo/Careem-style browsing.

2. Approved Logo

The approved Morning Box logo is the master brand mark for the MVP. Do not redraw, replace, stretch, recolour or add effects to it. Use sufficient clear space around it and preserve its aspect ratio. The full lock-up may include the tagline; compact UI placements may use an approved simplified/wordmark version only after one is supplied.

3. Colour System

Use a restrained warm palette derived from the approved logo and homepage direction. The values below are the working digital UI tokens for this standard. Minor technical adjustment for accessibility is allowed, but the visual family must remain unchanged.

Token	HEX	Usage
Morning Gold	#D99A12	Primary brand accent; CTA, active states, key highlights
Deep Espresso	#3B2D22	Primary text, dark sections, premium contrast
Warm Ivory	#FBF7EF	Default page background

Token	HEX	Usage
Soft Sand	#E9D8BD	Cards, panels, secondary surfaces
Muted Gold	#B98524	Borders, small labels, secondary accents
Pure White	#FFFFFF	High-contrast surfaces and image breathing space

Colour rule: Ivory/white should dominate. Gold is an accent, not a background for entire screens. Deep Espresso carries most text and premium dark sections. Sand and muted gold support cards, borders and subtle hierarchy.

4. Typography

Use a two-family system: an **elegant editorial serif** for major marketing headlines and a **clean modern sans-serif** for product UI, navigation, questions, buttons, labels and body copy. Recommended implementation: **DM Serif Display** (display/headlines) + **Inter** (UI/body). If the team cannot use these fonts, use a visually equivalent licensed alternative and obtain approval before changing.

Role	Style	Guideline
Hero / campaign headline	Editorial serif	48-72 px desktop; 36-48 px mobile; relaxed line-height
Section headline	Editorial serif	30-42 px desktop; 26-34 px mobile
UI title / question	Sans-serif semibold	24-32 px; direct and highly legible
Body / helper text	Sans-serif regular	16-18 px; 1.45-1.6 line-height
Buttons	Sans-serif medium/semibold	15-17 px; short action labels
Micro labels	Sans-serif medium	11-13 px; letter spacing allowed sparingly

5. Layout & Spacing

The homepage reference uses an editorial, hospitality-style composition: strong hero, large imagery, clean content bands and deliberate breathing space. Use an 8 px spacing system. Standard section spacing should feel generous: approximately 72-112 px desktop and 48-72 px mobile. Keep content widths controlled; avoid edge-to-edge text. Cards should use soft corners, light borders/shadows and ample internal padding.

Mobile-first requirement: The interactive demo must be designed and tested primarily for mobile. Desktop should expand the same system rather than create a separate visual language.

6. Components

Primary CTA: rounded/pill button in Morning Gold with strong contrast. **Secondary CTA:** text or outlined treatment. **Cards:** ivory/white/sand surfaces, subtle border or shadow, never heavy boxes. **Inputs:** large tap targets, simple borders, clear selected state. **Progress:** quiet and elegant; for the five-question flow show clear progress without gamification. **Icons:** thin, simple, consistent line style in Espresso or Gold.

7. Photography & Imagery

Use premium natural-light breakfast photography: warm morning sunlight, realistic ingredients, fresh bakery textures, ceramic/wood/linen materials and clean composition. Images should feel editorial and aspirational but believable. Avoid generic stock-food collages, oversaturated food, dark restaurant photography, cluttered tables and artificial CGI-looking meals.

8. Approved Homepage Visual Direction

The following image is the approved visual direction for Morning Box. It is a **design reference, not an approved content/copy specification**. Headlines, slogans, navigation labels, testimonials, claims, menu wording and other text shown here may be changed as product standards are finalized.

What to preserve from this reference: warm ivory base; gold + espresso hierarchy; premium editorial headline treatment; large natural-light food imagery; rounded gold CTA; generous whitespace; light line icons; soft card surfaces; clear section rhythm; calm luxury rather than flashy luxury.

9. Product UI Rules for the MVP Demo

One primary action per screen. The next step must always be visually obvious. Do not compete with multiple equal CTAs.

No restaurant browsing. Do not introduce restaurant/bakery grids, menus, ratings or marketplace-style discovery.

Personalization feels guided. The five-question journey should feel like a calm assistant, not a long form.

Selection is visual and immediate. Answer cards should be large, tappable and show a clear selected state.

Recommendation is the hero. The recommended Morning Box should feel curated and confident, not one option among dozens.

Bakery assignment is secondary. Show the assigned partner clearly, but do not visually turn it into a bakery-selection screen.

Business follows the same system. Meeting/Company flows use the same palette, typography, components and calm hierarchy.

Feedback remains lightweight. Keep post-delivery rating simple; do not overload the user with surveys.

10. Responsive & Accessibility Baseline

Design for common modern mobile widths first (approximately 375-430 px), then tablet and desktop. Minimum interactive target: about 44 x 44 px. Body text should remain comfortably readable without zoom. Maintain strong text/background contrast; do not use gold for small body text on ivory. Focus states, error states and selected states must not rely on colour alone.

11. Team Deliverables

For each approved screen, the India team should provide: mobile design, desktop adaptation where relevant, reusable component states, spacing/typography tokens, image specifications, hover/focus/selected/error states where applicable, and a clickable prototype. The team must reuse components rather than redesigning controls screen by screen.

12. Change Control

This document is **MB-DSN-001 v1.0**. Logo and visual direction are approved. Copy and slogans remain provisional. Any material change to palette, typography, logo treatment, component language or overall visual direction requires approval and should be recorded as a new revision (for example MB-DSN-001 v1.1).

Approval note: Build the MVP demo from this visual system. Do not add unrelated styles or marketplace conventions without explicit approval.
