

MB-FLW-001

Experience & Ordering Flow Standard

Version 1.0 | FINAL / LOCKED | September 2026

Morning Box - Your Personal Breakfast Assistant

Purpose

This standard defines the end-to-end MVP experience architecture for Morning Box, covering both Personal Breakfast and Business Breakfast journeys. It translates the locked product, personalization, menu and B2B rules into a simple ordering flow.

Core Experience Principle

> **Simple Questions. Clear Choices. Fast Decisions.**

Every screen should move the user closer to an arranged breakfast with minimum effort. Morning Box recommends rather than overwhelms, and it never becomes a bakery marketplace.

PART A - PERSONAL BREAKFAST FLOW

1. Homepage Entry Architecture

The homepage has two clear entry paths: Create My Morning for Personal Breakfast and Business Breakfast for team, meeting or company orders. The homepage does not show bakery browsing, a large menu, or product overload.

> **Personal -> Personalized Recommendation | Business -> Fast Group Ordering**

2. First-Time Personal User Flow

A first-time Personal User starts without registration. Morning Box first creates value, then asks the user to create an account only after the planned breakfast experience is complete.

> **Create My Morning -> 3 Base Profile Questions -> Choose Date(s) -> Daily Context -> Your Morning Box -> Size -> Swap (optional) -> Add Something Extra (optional) -> Final Breakfast + Price -> Weekly Summary -> Create Account / Sign In -> Delivery -> Payment -> Confirm**

The three Base Morning Profile questions are: Eating Style, Breakfast Preference, and Dietary Requirements & Allergies. Registration must not interrupt these steps.

3. Choose Date & Weekly Planning

The user selects one or more future breakfast dates. Every selectable morning must display the day and exact date clearly. The interface should not rely on weekday names alone.

> **Choose the dates first. Build one morning at a time.**

After the dates are selected, Morning Box completes each morning independently before moving to the next selected date.

4. Daily Context Screen

The active day and date must be bold and unmistakable at the top of the screen. The user then chooses one Daily Context: Active Morning / Regular Workday / Busy & On the Go / Relaxed Morning.

The Daily Context screen leads to the recommendation for that same date. When multiple dates are planned, the active date remains visible throughout the morning-building flow.

5. Morning-by-Morning Recommendation Flow

Each selected morning is completed before the user proceeds to another date. The recommendation screen shows the complete Morning Box, its components, available same-category Swaps, Size, approved Bread/Pastry add-ons, and live price.

> **Daily Context -> Recommendation -> Size -> Swap -> Add-ons -> Save This Morning**

For the next selected date, the user chooses Same as Previous Day or Choose a Different Morning. Copying carries Context, Breakfast, Size, Swaps and Add-ons to the new date, while keeping that date independently editable.

> **Complete one morning before moving to the next.**

6. Weekly Summary & Registration Gate

After the final selected morning is saved, the user sees a clean summary of all planned mornings, including exact dates, breakfast selection, size, price and an Edit action for each date. The total number of mornings and total order value are visible before registration.

Registration appears only after this value has been created. The prepared plan must remain intact through registration and must never be rebuilt.

7. Personal Account Creation / Sign In

MVP registration uses Mobile Number + OTP + First Name. Email is not mandatory during registration; an email for order confirmation may be collected optionally at checkout.

> **Never ask the user to rebuild their mornings after registration.**

8. Personal Delivery Details

The user provides Delivery Location and selects a Delivery Window rather than an exact delivery time. For multi-day orders, Morning Box first asks whether the same delivery details should apply to all mornings. If not, each date can have its own location and delivery window.

> **Set delivery once. Change it only when your morning changes.**

Exact cutoff times and delivery windows are intentionally deferred to MB-DLV-001.

9. Personal Order Review & Payment

Before payment, the user sees every planned date with Breakfast, Size, Extras, Delivery Window, Location and price. A clear financial summary shows breakfast/extras, delivery where applicable, and the final total. Email for order confirmation is optional.

The final payment methods depend on the selected payment gateway. The partner bakery is not a user choice and does not need to be shown before payment. After allocation, Order Details may display Prepared by [Partner Bakery].

10. Returning Personal User

Returning users do not repeat onboarding. Their Base Morning Profile and saved delivery information are retained. The main paths are Plan My Mornings, Reorder a Previous Morning, and Use This Plan Again.

Using a previous weekly plan copies it to explicitly selected future dates. The user can edit or delete individual mornings before review and payment. No order is created automatically.

> **Set it once. Come back and plan faster.**

PART B - BUSINESS BREAKFAST FLOW

11. Business Entry & Headcount

The user enters through Business Breakfast. Team, Meeting and Company are use cases, not separate products and not an extra mandatory question. The first business input is the total number of people.

Business Breakfast -> Number of People

12. Dietary Requirements & Allergies

Morning Box asks whether anyone in the group has dietary requirements or allergies. If No, the user continues. If Yes, the user creates one or more Special Breakfast groups by combining the relevant requirement/allergy with a quantity.

Example: Vegan + Nut Allergy x 2. The interface keeps the total visible, such as 20 People / 3 Special Breakfasts / 17 General Breakfasts.

Tell us the exceptions. We'll handle the rest.

13. Business Breakfast Selection

The user chooses between Morning Box Mix and Choose Your Boxes. Morning Box Mix distributes the general order across standardized breakfast models; Choose Your Boxes lets the user select the models and quantities directly.

In both paths, the user must see and confirm Breakfast Model x Size x Quantity. Available sizes are Light / Regular / Large, with Regular as default. Price updates immediately when Size or Quantity changes.

A clear Breakfast Total and applicable Volume Discount are visible before proceeding. Special Breakfasts remain protected and separate from the general mix.

Let Morning Box choose the mix - or choose the quantities yourself.

14. Business Date & Multi-Day Planning

The Business User selects one or more future dates, always displayed with exact dates. For multiple dates, Morning Box asks whether to use the same breakfast order for all selected days or customize each day.

Same Order for All Days copies Headcount, Special Breakfasts, Breakfast Mix, Size and Quantity. Customize Each Day allows independent editing of each date.

Plan once. Repeat when useful. Edit only what changes.

15. Business Delivery Details

Business delivery captures Company Name, Building/Tower, Office/Floor/Unit, Area, Contact Person, Mobile Number, optional Delivery Notes and a Delivery Window. The Contact Person may differ from the person placing the order.

For multi-day orders, the user can apply one delivery setup to all selected dates or set delivery details by day.

One delivery setup for the whole order - unless a day needs something different.

16. Business Account & Company Details

Business registration is delayed until the breakfast selection, dates and delivery setup are already defined. Required MVP details are First Name, Mobile Number + OTP, Company Name and Business Email.

Trade License, TRN, company size and other administrative details are not mandatory registration fields. Additional invoice information is collected only when required for the requested invoice.

17. Business Order Review, Discount & Payment

The final review shows each selected date with headcount, breakfast models, sizes, quantities, Special Breakfasts, delivery details and an Edit action. The financial summary clearly shows Breakfast Total, Delivery where applicable, Volume Discount and Final Total.

MVP Business orders are prepaid. If a Tax Invoice is requested, the necessary billing details are collected. After successful payment, Morning Box displays a clear Business Breakfast confirmation with order number, date(s), headcount, location and delivery window.

After bakery allocation, Order Details may show Prepared by [Partner Bakery]. Bakery selection and any multi-bakery fulfilment remain backend responsibilities.

18. Returning Business User & Reorder

Returning Business Users can start a New Business Breakfast, Reorder a Previous Order, or Use a Saved Plan. Previous company and delivery information can be reused, while dates, quantities, boxes, sizes, Special Breakfasts and delivery details remain editable before confirmation.

Saved plans and reorders are deliberate user actions. They are not subscriptions and never create an automatic recurring order.

> **Repeat the order, not the work.**

Final MVP Flow Boundaries

MB-FLW-001 preserves the locked MVP boundaries: no marketplace, no bakery browsing or selection, no same-day/on-demand ordering, no subscription, no automatic recurring orders, no loyalty programme, no build-your-own breakfast, and no unapproved full bakery menu.

Exact cutoff times, delivery windows and last-mile operating rules are deferred to MB-DLV-001. Exact discount tiers, thresholds and percentages remain subject to costing and pricing specifications.

MB-FLW-001 v1.0 - FINAL / LOCKED
