MB-PRD-001

Morning Box Core Product Standard

Version 1.0 | FINAL / LOCKED | 14 September 2026

Purpose

This document defines the locked core product principles for the Morning Box MVP. Future UX, personalization, menu, business, ordering and delivery standards must follow these foundations unless a formally approved revision is issued.

> **Morning Box should make choosing tomorrow's breakfast feel easier than browsing a food-delivery app.**

Document Status

Status: FINAL / LOCKED
Owner: Morning Box
Change control: Core decisions in this standard should not be reopened during downstream design or development without explicit approval.

1. Product Definition

Official Definition

Morning Box is a personal breakfast assistant that helps users choose and order the right breakfast quickly, through a simple guided experience and standardized breakfast options prepared fresh by partner bakeries.

Core Philosophy

Morning Box helps users reach the right breakfast with minimum effort.

What Morning Box Is Not

Morning Box is not a food-delivery marketplace, restaurant directory, or menu-browsing platform.

2. Core Problem & Personalization

Personalization Inputs

Preference / Dietary Restrictions & Allergies / Portion Need / Preferred Price Category. Morning Box uses a few simple choices to recommend a breakfast specifically suited to the user.

Safety Rule

Safety restrictions override preferences. Allergies and dietary restrictions filter out unsafe or incompatible options before preference, portion and price logic are applied.

Decision Philosophy

Simple Questions -> Relevant Recommendation -> Quick Decision. The user should not have to search for the right breakfast; Morning Box should help find the right breakfast for them.

3. Target Users & MVP Scope

Target Groups

B2C - Personal Users
B2B - Business Users

Geographic Rollout

Phase 1: DIFC - Pilot & Initial Launch
Phase 2: Downtown Dubai
Phase 3: Meydan One
The three areas belong to the MVP roadmap but are launched sequentially, not simultaneously.

4. Core Product Structure

Primary Path

Create My Morning - Personal Breakfast

Secondary Path

Morning Box for Business - Business Breakfast

Principle

Personal and Business journeys remain separate, simple and purpose-driven.

5. Product Standardization & Partner Bakery Model

5.1 Morning Box Product Standard

Morning Box owns and defines the product specification, including main ingredient types, ingredient quantities, composition, portion standard, preparation standards where quality-relevant, presentation and freshness. The same Morning Box must represent the same product standard regardless of which partner bakery prepares it.

5.2 Partner Bakery Qualification

Every Morning Box partner bakery must bake its own bread in-house. A bakery that buys and resells bread does not qualify. Additional qualification standards may cover ingredient quality, consistency, hygiene, packaging and delivery capability.

5.3 Responsibility & Delivery

The Partner Bakery prepares the Morning Box. Delivery is handled through an approved third-party logistics partner under Morning Box delivery standards. Morning Box owns the customer experience and coordinates standards. The final last-mile operating model will be defined separately in MB-DLV-001.

5.4 Packaging & Branding

Primary packaging belongs to the Partner Bakery and uses its own branding while meeting Morning Box quality standards. Morning Box does not require full custom packaging for the MVP. A small minimalist Morning Box identification sticker may be placed on a corner of the package without covering the bakery identity or implying that Morning Box manufactured the food.

6. Ordering Principles

6.1 Pre-Order

Morning Box is a pre-order breakfast service, not an on-demand delivery service. Users may order for tomorrow or multiple future days. Same-day/on-demand, subscriptions and recurring orders are outside the MVP.

6.2 Order Cut-off

Next-day orders must be placed before a defined daily cut-off time. The exact operational cut-off will be determined later.

6.3 Delivery Time Selection

Users select a predefined morning delivery window rather than an exact delivery time. Exact windows will be defined in the delivery standard.

6.4 Modification & Cancellation

Users can modify or cancel an order before a defined cut-off without contacting support. Simple changes should not require WhatsApp, calls or manual support.

6.5 Payment

The customer pays Morning Box directly. Morning Box manages settlement with the Partner Bakery and Delivery Partner behind the scenes, creating one checkout and one transaction from the customer's perspective.

7. Recommendation & Choice Philosophy

7.1 Recommendation Structure

After personalization, Morning Box shows only a dominant Your Morning Box recommendation and one secondary Another Option for You. Morning Box recommends rather than displays a menu.

7.2 Limited Menu

Morning Box maintains an intentionally limited and standardized breakfast menu. A new breakfast option should only be added if it serves a clearly different user need or profile. Fewer products -> Better matching -> Easier operations -> More consistent quality.

7.3 Customization Boundary

Morning Box is personalized, but it is not a build-your-own breakfast platform. Core breakfast composition is fixed. The only direct product customization currently defined for the MVP is Choose Your Bread, using a short standardized list supported by partner bakeries. Portion and price category are recommendation dimensions, not build-your-own controls.

7.4 Recommendation Consistency

Same Inputs -> Same Recommendation. Users who provide the same set of answers receive the same Primary Recommendation and Alternative. MVP recommendation logic is deterministic/rule-based rather than random or opaque.

8. Returning User Experience

8.1 Morning Profile Persistence & Editing

After first personalization, Morning Box retains the user's Morning Profile. The user does not repeat onboarding questions for every order. The profile is persistent but editable: the user can change only the desired field - Preference, Dietary Restrictions & Allergies, Portion or Price Category - and save it.

Principle

Set it once. Change only what you want.

8.2 Returning Experience

A returning user goes directly to Your Morning Box, with a fast path to order again/order for tomorrow, view the single alternative, or edit preferences. Repeated onboarding is avoided.

9. Business Experience Principles

9.1 Business Product Structure

The MVP contains two business products: Meeting Box for meetings and smaller groups, and Team / Company Box for team or company breakfast. Event Box is outside the MVP.

9.2 Business Ordering Logic

Occasion -> Breakfast Type -> Number of People -> Dietary Needs & Allergies -> Price Level -> Date & Delivery Window -> Location -> Confirm. Breakfast Type exists as a required step, but its exact categories and contents will be defined later in MB-BOX-001.

9.3 Business Customization Boundary

Morning Box provides controlled customization, not custom catering. Businesses cannot construct boxes item-by-item. Necessary dietary requirements and allergies are managed within predefined Morning Box standards.

10. Bakery Allocation Principle

10.1 Automatic Bakery Allocation

The customer does not choose the Partner Bakery. Morning Box automatically assigns the most suitable eligible Partner Bakery. In the MVP the primary logic is Proximity First, subject to eligibility, product availability, capacity and ability to meet the selected delivery window. If the nearest bakery cannot fulfil the order, the next eligible bakery is considered.

10.2 Future Allocation Logic

MVP: Proximity First -> Future: Best Available Bakery. Future allocation may incorporate product consistency, food quality, freshness, packaging, on-time performance, order accuracy, customer feedback and failure/cancellation rates.

11. Customer Visibility & Bakery Identity

Principle

The customer does not choose the Partner Bakery, but the bakery preparing the order is clearly identified after allocation.

Customer Experience

The allocated bakery appears in Order Confirmation and Order Details as Prepared by [Partner Bakery]. The order arrives in the bakery's branded packaging with the small Morning Box identification label. Morning Box therefore preserves bakery identity without becoming a marketplace.

12. Feedback & Learning Principle

MVP Feedback

Feedback remains intentionally lightweight: Loved it or Not for me. If the user selects Not for me, a short predefined reason may be selected.

Future Learning

Feedback can later support both personal recommendation improvement and Partner Bakery performance evaluation. Complex ratings and reviews are not required in the MVP.

13. MVP Boundaries

Explicitly Outside MVP

Marketplace functionality; bakery browsing or selection; same-day/on-demand ordering; subscriptions; recurring orders; loyalty programs; build-your-own breakfast; custom catering; complex AI features; restaurant directory.

MVP Principle

The MVP should validate the simplest complete Morning Box experience before additional features are introduced.

Items Intentionally Deferred

The following are intentionally left for dedicated downstream standards rather than treated as gaps in this document: exact breakfast types, menu composition and product count; exact personalization questions and answer options; detailed delivery cut-offs, time windows, batching and last-mile economics; and detailed B2B dietary handling.

Downstream standards must follow MB-PRD-001 rather than reopening its locked core product decisions.
