

MB-USR-001

Morning Box User & Use Case Standard

Version 1.0 | FINAL / LOCKED | 14 September 2026

Purpose

This standard defines the core Morning Box MVP users, their primary use cases, their goals, and the user scenarios intentionally kept outside the MVP. It must remain consistent with MB-PRD-001 - Core Product Standard.

> **The user should reach the right breakfast with minimum time, effort and unnecessary decision-making.**

1. Personal User Definition

A Personal User is someone who wants a convenient, personalized and reliable breakfast for a planned morning, without having to browse menus or decide between many options.

The Personal User is not limited to an office worker. The defining need is a personalized, pre-planned breakfast experience. The user may be working in the area, attending a meeting, staying nearby, working from home, or otherwise planning breakfast for a future morning.

2. Business User Definition

A Business User is someone ordering breakfast on behalf of a team, company or meeting, who needs a simple and reliable way to arrange breakfast for multiple people without managing individual orders or complex catering choices.

The Business User may be an Office Manager, Executive Assistant, HR representative, Team Lead, or any person responsible for arranging breakfast for a group. The role or job title is not the defining factor; ordering on behalf of a group is.

3. Primary Use Cases

A. First-Time Personal Order
A new user wants breakfast for a future morning, completes the short personalization process, receives a recommendation and places an order.

B. Returning Personal Order
Morning Box already has the user's Morning Profile. The user sees the existing recommendation, can order quickly for a future morning, and only edits the profile if desired.

C. Meeting Breakfast
A Business User arranges a standardized breakfast order for a meeting and multiple people.

D. Team / Company Breakfast
A Business User arranges a standardized breakfast order for a team or larger company group.

4. User Goals

Personal User Goal
Get the right breakfast for me with minimum time, effort and decision-making.

Business User Goal
Arrange the right breakfast for a group quickly and reliably, without managing individual orders or complex catering.

Shared Product Goal
The shortest sensible path from "I need breakfast" to "Breakfast arranged."

5. Out-of-Scope Users & Use Cases

Morning Box MVP is not designed for users looking for immediate or on-demand breakfast, restaurant or bakery browsing, fully customized meals, event catering, subscriptions, recurring automated orders, or individual item-by-item meal construction.

For Business Users, orders requiring fully customized catering, event management, or separate individual meal selection for every participant are outside the MVP.

Design Implication

Future Morning Box flows should be designed around these defined users and use cases. New user types or scenarios should not be introduced into the MVP unless explicitly approved through product change control.

> **Simple users. Clear use cases. Minimum friction.**
