MORNING BOX

Your Personal Breakfast Assistant

MVP MASTER PLAN

From Concept to DIFC Launch

Version 1.1 | September 2026

Source of Truth

This Master Plan is the execution map for the Morning Box MVP. Detailed rules remain governed by the locked standards below. Where a Master Plan summary and a locked standard differ, the locked standard is the source of truth.

Standard	Scope
MB-PRD-001	Core Product Standard
MB-USR-001	User & Use Case Standard
MB-DSN-001	Design & UI Standard
MB-PER-001	Personalization & Morning Profile Standard
MB-BOX-001	Breakfast Box & Menu Architecture Standard
MB-B2B-001	Business & Team Breakfast Standard
MB-FLW-001	Experience & Ordering Flow Standard
MB-DLV-001	Delivery & Fulfilment Standard
MB-BKY-001	Partner Bakery Standard
MB-OPS-001	Operations Standard
MB-PRO-001	Production & Food Specification
MB-REC-001	Recommendation & Decision Logic Standard

A separate Food Safety & Handling Standard may be created at operational launch stage using applicable official food-safety requirements and Partner Bakery procedures.

1. Executive Summary & Vision

> ***Morning Box is not a food-ordering marketplace. It is a personal breakfast assistant.***

Morning Box helps users start their day with a breakfast selected around lifestyle, dietary requirements, allergies and the context of that specific morning. The MVP is deliberately simple: a guided experience, a controlled product library, deterministic recommendation logic, fresh production by approved partner bakeries and scheduled next-day delivery.

- Positioning: Your Personal Breakfast Assistant.
- Customer promise: simple questions, clear choices and fast decisions.

- Operational principle: standardize the outcome while keeping bakery execution practical.
- MVP launch geography: DIFC first.
- Initial expansion path after proof: Downtown and Meydan One.
- Core product paths: Personal Breakfast and Business Breakfast.

2. MVP Scope

IN MVP	OUT OF MVP
Personalized Personal Breakfast	Marketplace or bakery browsing
Business Breakfast	Same-day / on-demand ordering
Pre-order for tomorrow / selected future days	Subscription or silent recurring orders
32 approved Base Recommendations	Build-your-own breakfast
Health-Conscious / Flexible eating styles	Unlimited menu customization
Four Breakfast Preferences and four Daily Contexts	Complex AI claims
Safety/dietary filtering and approved substitutions	Unapproved bakery-menu substitutions
Controlled Swap, Size and Bread/Pastry Add-ons	Beverages as delivered base-box items
Partner bakery allocation by proximity first	Customer choosing the bakery
Scheduled delivery windows	Custom catering outside approved B2B model
Loved it / Not for me feedback	Automatic behavioral learning in MVP

Orders are pre-order only. Customer checkout/registration occurs after recommendation and customization, not before. The system must remain low-friction and avoid unnecessary questions.

3. Complete Personal Customer Journey

Stage	Customer experience	System action
1. Landing	Choose personal breakfast path	Enter Personal flow
2. Base Morning Profile	Eating Style; Breakfast Preferences; Dietary Requirements & Allergies	Store reusable profile
3. Select Day(s)	Tomorrow, one/multiple days or coming week; dates visible	Create day records
4. Daily Context	Active / Regular / Busy / Relaxed for each selected day	Apply day-specific context
5. Recommend	See Your Morning Box and, when eligible, Another Option for You	Run deterministic recommendation engine
6. Customize	Optional Swap; Size where meaningful; optional Add-ons	Re-run eligibility on customization
7. Save Day	Save and move to Next Day; copy previous day when useful	Persist day configuration
8. Checkout	Name and required checkout/payment details	Create confirmed order
9. Fulfilment	Bakery allocation, production, QC, courier delivery	Operate cutoff-to-delivery cycle
10. Feedback	Loved it / Not for me	Store learning signal

> ***Recommend first -> Customize second.***

Users may reuse a prior weekly plan, but MVP does not create silent subscriptions or automatic recurring orders. Changes/cancellations follow the locked ordering rules, including the established 12-hour change/cancel window.

4. Recommendation & Product System

> ***Safety -> Eating Style -> Daily Context -> Breakfast Preference -> Dietary Compatibility -> Eligible Base Recommendation -> Your Morning Box / Another Option***

- MVP engine is rule-based and deterministic: Same Inputs -> Same Recommendation.
- Multiple Breakfast Preferences expand the candidate pool; they never create a hybrid breakfast.
- Safety and dietary requirements are hard eligibility gates.
- System substitutions happen before recommendation display; user swaps happen after recommendation.

- Size changes quantity, not composition. Regular is default where size selection exists.
- Only approved Bread and Pastry Add-ons exist in MVP.
- No-match is an acceptable output; safety, Eating Style and Daily Context are never silently weakened.

4.1 Context Tie-Break Priorities

Daily Context	1	2	3	4
Active Morning	Savory	Fresh & Wholesome	Bread & Pastry	Sweet
Regular Workday	Savory	Fresh & Wholesome	Bread & Pastry	Sweet
Busy & On the Go	Bread & Pastry	Savory	Sweet	Fresh & Wholesome
Relaxed Morning	Savory	Bread & Pastry	Fresh & Wholesome	Sweet

The product system is built from the approved Core Component Library and 32 Regular-size Base Recommendations in MB-PRO-001. Light/Large are derived from component-level portions; simple Busy products may use one Standard Size only.

5. Business Breakfast Journey

Step	B2B flow
Entry	Business Breakfast from homepage
People	Number of people is the first question
Breakfast selection	Morning Box Mix or Choose Your Boxes
Special requirements	Special Breakfast groups for dietary/allergy needs
Schedule	Select day(s) and delivery requirement
Review	Quantities proportional to attendees; mixed varieties available
Payment	Prepaid; invoice generated
Fulfilment	One bakery whenever practical; expand allocation only if capacity requires

- Team / Meeting / Company are use cases, not a mandatory first classification screen.
- Business Breakfast does not expose consumer Swap, component customization or Add-on logic.
- Business customers should verify allergy/dietary information with attendees before ordering.
- Large-order discounts may be commercialized, but exact discount numbers remain a commercial decision until approved.

6. Partner Bakery Operating Model

Partner bakeries prepare Morning Box products; Morning Box owns the ordering relationship.

- Partner must bake its own bread in-house.
- Partner must be able to produce the approved Morning Box Core Library and standards it is contracted to supply.
- Each approved product requires ingredient/allergen records sufficient for eligibility and safety.
- Same Morning Box Standard does not require the same ingredient supplier across bakeries.
- Customer does not browse/select the bakery. MVP allocation is Proximity First, subject to eligibility/capacity.
- After allocation, customer may see: Prepared by [Partner Bakery].
- Accepted Order = Production Commitment.
- Bakery actions: Confirm -> In Preparation -> Report Delay -> Ready.
- Bakery must complete final product QC before Ready status.

6.1 Bakery Onboarding Gate

Gate	Required evidence / setup
Eligibility	In-house bread production and operational suitability
Product approval	Approved Morning Box items and portion/production standards
Safety data	Ingredient, allergen and dietary compatibility records
Capacity	Daily capacity by relevant order window

Packaging	Ability to meet component separation and protection requirements
System readiness	Order receipt, confirmation, status and exception workflow
Pilot	Successful controlled production and handoff test

7. Delivery & Fulfilment Model

- Customer ordering cutoff: 9:00 PM on the previous day.
- Delivery windows: 7:30-8:30 / 8:30-9:30 / 9:30-10:30.
- Delivery is scheduled, not on-demand.
- Route consolidation is used where practical without compromising freshness.
- Delivery may be to door or reception according to order/location setup.
- Proof of delivery is required.
- If Morning Box cannot fulfil a paid breakfast, the affected breakfast receives a full refund.

Freshness and reliable scheduled arrival take priority over on-demand speed.

8. Technology & MVP Architecture

Surface	MVP responsibility
Customer Web/PWA	Landing, profile, day planning, recommendation, customization, checkout, order management, feedback
Recommendation Engine	Rule-based eligibility, matching, tie-break, alternative, substitution and traceability
Admin / Operations	Orders, allocation, capacity, exceptions, customer issue visibility, refunds/status oversight
Bakery View	Assigned orders, production details, special requirements, Confirm/In Preparation/Delay/Ready
Delivery Coordination	Ready orders, pickup/handoff, delivery status and proof
Data Layer	User profile, day context, product library, allergen/dietary records, recommendations, final configuration, feedback

8.1 Required Customer Screens

Landing -> Personal / Business entry -> Base Morning Profile -> Day selection -> Daily Context -> Recommendation -> Breakfast detail/customization -> Add-ons -> Day saved / Next Day -> Checkout -> Confirmation -> Order management -> Feedback.

8.2 Required Operational Logic

- Provisional bakery capacity allocation when customer orders; finalize allocation at cutoff.
- Exception queue for delays, unavailable approved components, capacity issues and delivery problems.
- Trace every recommendation from inputs through substitutions/swaps to final configuration.
- Normal operations should be automated; exceptions should be surfaced.

9. Roles & Responsibilities

Party	Primary responsibility
Morning Box / Studio Nest	Product ownership, standards, customer experience, partner governance, pricing/commercial policy, operations oversight, data/analytics
Development Team	Build customer, backend, recommendation, admin/bakery workflows; QA and deployment against locked standards
Partner Bakery	Approved food production, ingredient/allergen records, packaging, production status, QC and ready handoff
Delivery Company	Pickup, transport, delivery status and proof of delivery within agreed windows

Payment / Supporting Providers	Authorized payment or operational services as selected for MVP

IP, development ownership, commercial contracts and partner obligations should be documented in the relevant agreements; the Master Plan does not replace contracts.

10. Launch Geography & Partner Strategy

Phase 1: DIFC first.

Phase	Geography	Goal
Pilot / Launch	DIFC	Prove customer flow, bakery production, delivery reliability and repeat demand in a concentrated area
Expansion 1	Downtown Dubai	Extend after DIFC operational stability
Expansion 2	Meydan One	Extend after partner/courier capacity and economics are validated

- Start with the smallest practical number of qualified bakery partners needed for reliable coverage and backup.
- Partner selection prioritizes production quality, in-house bread, operational discipline, product compatibility, capacity and delivery practicality.
- Do not expand geography before the DIFC operating model is stable.

11. Commercial Model

Customer pays Morning Box.

- Morning Box controls customer-facing pricing and checkout.
- Breakfast price architecture: Base Breakfast + Size Adjustment + Add-ons.
- Approved same-group Swaps do not change price.
- Bread/Pastry Add-ons are priced independently of Breakfast Size.
- Business Breakfast is prepaid and invoiced.
- Commercial agreements must define bakery settlement, delivery cost, payment fees, refunds and Morning Box margin.

Exact retail prices, bakery settlement rates, delivery charges, large-order discount thresholds and target margins are intentionally not invented in this Master Plan. They require supplier quotations, pilot cost data and explicit approval.

12. MVP Development Roadmap

Phase	Deliverable	Exit condition
A. UX Specification	Screen-by-screen customer + B2B + operational flows	Every screen/action mapped to locked standards
B. Interactive Demo	Clickable high-fidelity demo	Core personal and business journeys testable end-to-end
C. Technical Build	Customer app/PWA, backend, engine, admin/bakery workflow	Core functional QA passed
D. Partner Setup	Bakery product mapping, records, capacity, packaging and commercial setup	At least one launch-ready bakery + contingency plan
E. Delivery Setup	Courier process, windows, handoff and POD	Controlled delivery test passed
F. Closed Pilot	Real orders with controlled user group	Operational KPIs within launch thresholds
G. DIFC Launch	Public/limited launch in DIFC	Daily operating rhythm stable
H. Optimize	Feedback, conversion and operational improvements	Evidence supports expansion decision

Immediate next build artifact after this Master Plan: Screen-by-Screen UX & Functional Specification for the interactive demo and development team.

13. Pilot & Testing Plan

Test area	What must be proven
Profile & recommendation	Correct deterministic result for representative input combinations
Safety	Allergen/dietary exclusions and approved substitutions behave correctly
Customization	Swap, Size and Add-ons never bypass eligibility
Ordering	Day selection, next-day cutoff, checkout, edit/cancel rules and confirmation
Bakery	Order visibility, portions, packaging, QC and status updates
Delivery	Pickup readiness, handoff, correct address/order and delivery window
B2B	People count, mix/box quantities, special breakfasts, invoice and fulfilment
Exceptions	No-match, unavailable component, delay, capacity, payment/refund and delivery issue

- Use test orders across all four Daily Contexts and both Eating Styles.
- Include multi-preference and single-preference cases.
- Include allergy/dietary test cases with safe no-match outcomes.
- Pilot must test both product quality at packing and quality on arrival.

14. Launch Operations - Daily Rhythm

Time / Stage	Operating action
Before 9 PM	Customers place/modify eligible next-day orders; provisional capacity tracked
9 PM cutoff	Order intake closes for next-day breakfast; allocation/capacity finalized
Post-cutoff	Bakery production lists and special requirements finalized; exceptions surfaced
Early morning	Production, packing and product QC
Ready-by	Bakery marks orders Ready; courier handoff coordinated
7:30-10:30	Deliveries executed within selected windows; POD captured
After delivery	Exceptions/refunds handled; feedback available; operational data reviewed

Automate the normal. Surface the exception.

15. KPIs & Learning

KPI group	Core MVP measures
Demand	Visitors, profile completion, recommendation-to-checkout conversion, orders/day
Recommendation	Your Morning Box acceptance, Another Option selection, Swap rate, No-match rate
Product	Size mix, Add-on rate, Loved it / Not for me, repeat breakfast choices
Operations	Order accuracy, bakery confirmation/ready performance, exception rate
Delivery	On-time delivery by window, failed/late delivery, proof-of-delivery completion
Retention	Repeat users, repeat-week usage, days ordered per active user
B2B	Business inquiries/orders, people per order, repeat business customers
Economics	Average order value, bakery cost, delivery cost, refunds, contribution margin once commercial rates are approved

MVP feedback is collected as a learning signal. A single Loved it / Not for me event does not automatically alter deterministic recommendation rules.

16. Risk & Exception Plan

Risk / exception	MVP response
Allergy/dietary conflict	Hard filter; approved substitution only; otherwise no recommendation
No eligible breakfast	Show safe no-match message and Review my preferences
Bakery capacity reached	Use allocation/capacity logic; eligible backup partner where available; do not over-accept
Approved component unavailable	Approved substitution only where allowed; otherwise exception handling / affected order resolution
Bakery delay	Report Delay -> operations exception queue -> courier/customer handling as appropriate
Courier delay	Track exception, communicate status, protect freshness; refund/remedy according to fulfilment outcome
Incorrect breakfast / QC failure	Do not mark Ready until corrected; escalate if correction threatens delivery
Payment/order failure	Do not treat as confirmed paid order until payment/order state is valid
Morning Box cannot fulfil	Full refund for affected paid breakfast
Partner inconsistency	QC/performance review; corrective action or pause allocation

Detailed numeric food-safety parameters should be governed by applicable official requirements and Partner Bakery safety procedures, not invented inside the product Master Plan.

17. Post-MVP Roadmap

After proof	Potential development
Geography	Downtown, then Meydan One, then further zones based on demand/operations
Partner intelligence	Bakery performance/ranking beyond simple proximity-first allocation
Learning	Behavioral personalization using sufficient reliable feedback/history
Convenience	Faster reuse of prior plans while retaining user control
Beverage opportunity	Optional next-day hot/fresh drink suggestion only after operational validation
Product evolution	Controlled expansion only when it preserves simplicity and cross-bakery operability

- Do not introduce marketplace browsing, excessive menu choice or complexity simply because more partners/products become available.
- The product philosophy remains: Ask less. Learn more.

18. Implementation Checklist & Launch Gate

Launch Gate	Status at Master Plan v1.0	Required before DIFC pilot
Core standards	DONE	Keep locked source-of-truth set controlled
Recommendation/Product logic	DONE	Implement exactly and test
Screen-by-screen UX spec	NEXT	Approve all customer/B2B/ops screens
Interactive demo	PENDING	End-to-end clickable test
Technical MVP build	PENDING	Functional QA passed
Launch bakery partner	PENDING	Commercial + product + safety + capacity onboarding complete
Delivery partner/process	PENDING	Window/handoff/POD test complete
Pricing & unit economics	PENDING	Approved retail and settlement economics
Payments / invoice flow	PENDING	Successful test transactions and B2B invoice process
Closed pilot	PENDING	Real-order pilot completed
DIFC launch approval	PENDING	Launch KPIs, operations and exception handling accepted

Launch only when product, technology, bakery production and delivery work as one system - not as separate completed tasks.

Immediate Action Plan

Priority	Action	Output
1	Create Screen-by-Screen UX & Functional Specification	Single build-ready flow for Personal, Business and operational surfaces
2	Convert specification into interactive demo	Demo for user testing, DIFC discussions and partner conversations
3	Shortlist/onboard DIFC bakery partner(s)	Product mapping, capacity, allergen records, packaging and commercial terms
4	Confirm delivery operating model	Windows, handoff, pricing, POD and exception workflow
5	Lock commercial numbers	Retail prices, bakery settlement, delivery cost, fees and target margin
6	Build and QA MVP	Functional system against locked standards
7	Run closed DIFC pilot	Evidence for launch decision

The next project workstream should therefore be the Screen-by-Screen UX & Functional Specification. It should translate the locked standards into exact screens, fields, buttons, states, validations and backend actions without reopening already-approved product rules.
